

## SUMMARIES FOR RESELLER WEBSITES

### **Enskill® Ed from Alelo**

An asynchronous teaching tool driven by artificial intelligence (AI) that teaches students through online conversations with avatars. Students are assessed during the conversation and the AI delivers personalized exercises for improvement. Teachers can track classroom or individual learner performance and use the collective data to improve curriculums. Educational institutions can reduce teacher workloads and offer asynchronous learning at lower costs with superior results.

### **Enskill® English from Alelo**

Students role-play online with artificial intelligence avatars to gain English-language fluency fast. They practice speaking without fear of failure, building confidence for real-life speaking encounters. Personalized grammar and pronunciation exercises focus on only areas needing improvement. With these tasks covered through asynchronous learning, teachers have more time for classroom instruction. That means more students can be taught, all while lowering cost and increasing effectiveness.
