

A Revolution in English-Language Education

Improve student fluency with online avatar-based AI instruction

Hi. Welcome to the Metropolitan train station. Where are you traveling to?

The advantages to administrators

- ✓ Increase student-to-teacher ratios while providing more personalized learning
- ✓ Better prepare students with the specific English skills required for employability
- ✓ Enable students to become fluent English speakers faster, with greater retention, and at lower costs
- ✓ Enhance student motivation leading to increased program satisfaction
- ✓ Track student performance across classes and institutions
- ✓ Give teachers more time for classroom instruction and reduce their time on rote practice sessions
- ✓ Use effectively in small or large class sizes

How Enskill® English works

Using Enskill English, students role-play with AI avatars in immersive simulations that reflect authentic scenarios. A student's specific responses to the avatar directs the simulation's path, creating a unique experience for each student and each practice session. Avatars mimic the culture, behavior, and gestures of the English language, providing deep language immersion. Alelo's patented AI simulations can be accessed on laptops and mobile devices.

Enskill English is used in 25 countries and can also be used to teach ESL and ELA students in the U.S.

Three existing courses. Custom options available.

- 1) Enskill Basic English
- 2) Enskill Transitional English
- 3) Enskill Refresher English

Why Enskill® English is so effective

Students can practice anytime, anywhere

Cloud-based learning allows students to practice independently whenever they have time and as often as they need.

A fast track to building new behavior

Increased practice repetitions with AI avatars in authentic scenarios develop behavior patterns that make real-life encounters feel familiar.

Reduce student anxiety

Fear of public failure depresses the willingness to speak in a class. Avatar-based simulations reduce student anxiety and encourage more practice.

Immediate, personalized feedback

The immediate feedback of AI simulations gives the student a faster, surer path to fluency and retention.

Instructors monitor student progress

Data is collected from each student, allowing teachers to identify students who need assistance while keeping all students accountable.

Continual improvements to instruction

With the ability to record each student's performance, Alelo's AI-based simulations allow for continual machine-learned improvements to the AI models.

A Revolution in English-Language Education

IMPROVE STUDENT FLUENCY WITH ONLINE AVATAR-BASED AI INSTRUCTION

Choose from three existing Enskill® courses – or create your own

The Alelo Enskill English courses shown below are designed to help students increase language proficiency at every stage of their development. Alelo's team can also create customized Enskill English courses. With our AI expertise, extensive language education experience, and a base of knowledge for languages used in 25 countries and over 100 cultures, you can rely on Alelo to create an effective learning regimen to meet your needs.

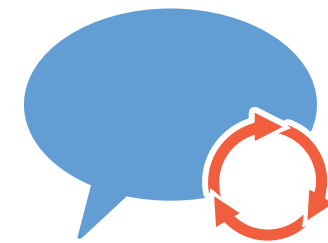

Enskill Basic English

The Enskill Basic English course helps beginners transition to the Waystage or CEFR A2 level. Greetings and introductions, asking/giving personal information and directions, along with expressing likes and dislikes are included in the Enskill Basic English course.

Enskill Transitional English

The Enskill Transitional English course is for advanced beginners ready for transition to the Independent or CEFR B level. The course covers conversations like ordering a meal, renting an apartment, attending a concert, and visiting the post office.

Enskill Refresher English

Enskill Refresher English is adapted for intermediate-level learners and helps them quickly recover lost proficiency. This course is especially suitable for learners who have missed language classes due to COVID-19 lockdowns.
